FAB Mobile App
User Guide 2026

Setup, features and everyday tasks — a friendly walkthrough of the First Abu Dhabi Bank mobile app for iPhone and Android.

New to the app? This guide takes you from download to daily use in plain steps: installing and registering, signing in with Face ID or fingerprint, reading the home screen, managing your cards, paying bills, setting alerts and fixing common problems.

Independent user guide. Not affiliated with First Abu Dhabi Bank (FAB). App screens may vary slightly by version.

1. What you can do in the app

The FAB mobile app puts the everyday jobs of a bank branch into your phone. Once you are set up, most tasks take under a minute:

- See your accounts and cards on one home screen, with recent activity for each.
- Check account and card balances at any time, and download or share statements.
- Move money between your own accounts, and send transfers to other accounts.
- Pay utility and telecom bills (electricity, water, mobile, internet) from the app.
- Manage your cards: freeze or unfreeze a card, change limits, and report a card lost.
- Set up alerts so you are notified about activity on your accounts and cards.
- Find branches and ATMs, and reach customer support from inside the app.

2. Getting started

Download and install

Search for “FAB Mobile” in the Apple App Store or Google Play Store and install the official app by First Abu Dhabi Bank. Check the publisher name before installing — never use look-alike apps from unknown developers.

Register and sign in

- Open the app and choose the registration option for existing customers.
- Enter your account or card details exactly as the bank issued them, and verify with the one-time code sent to your registered mobile number.
- Create your username and password, then enable Face ID or fingerprint sign-in — it is faster and safer than typing a password every time.
- On your first sign-in, review the contact details on file so future verification codes reach the right number.

3. Reading the home screen

The home screen is your dashboard. At the top you will see your accounts with their current balances; below them, your cards. Tap any account or card to open its detail page, where you can scroll through recent transactions, search by amount or date, and download a statement for a chosen period. A quick pull-down refresh updates the figures.

4. Everyday tasks, step by step

View activity and statements

Open an account or card, tap the transactions or statements option, pick the period, and export. Statements download as PDF — handy for visa applications, tenancy paperwork and your own records.

Pay a bill

Go to Payments, choose the biller (for example your electricity and water authority or your telecom provider), enter your account number with the provider once, and the app saves it for next time. Confirm the amount, pay, and keep the receipt the app shows you.

Manage your cards

- Misplaced a card? Open the card, tap Card Controls and freeze it instantly. Found it again? Unfreeze in the same place.
- Set a daily spending or ATM limit that matches your habits — lower limits mean lower risk.
- Travelling soon? Add a travel notice so your card keeps working abroad without surprises.

Turn on alerts

In Settings, open Notifications and switch on transaction alerts. A message for every debit and credit is the simplest fraud early-warning system there is — if something moves and you did not do it, you know within seconds.

5. Troubleshooting

Problem	What usually fixes it
App will not open or crashes	Update the app from the store, restart the phone, and clear the app cache on Android.

Verification code never arrives	Check the mobile number on file is current, wait two minutes, then request a new code — repeated requests can delay delivery.
Face ID / fingerprint stopped working	Re-enable biometric sign-in in the app settings, or sign in once with your password to reactivate it.
A payment looks stuck	Wait a few minutes and check the transaction list before paying again — paying twice is the most common app mistake.
Forgot password	Use “Forgot password” on the sign-in screen and reset it with a verification code; never share that code with anyone.

6. Quick safety checklist

- Only install the official app, and keep it updated.
- Use biometric sign-in plus a strong, unique password.
- Never share one-time codes — bank staff will never ask for them.
- Turn on transaction alerts and review them weekly.
- Avoid banking on public Wi-Fi; your mobile data connection is safer.
